

**ABSTRACT**

- 5     Operating an on-demand wallpaper printing business comprises a number of steps. The business operator uses  
an on-demand printer comprising a cabinet in which is located a media path which extends from a media  
loading area to a printhead and from the printhead to a dispensing slot. One or more printer input devices  
communicate with a processor to capture data regarding one or more customer's requirements. The captured  
data includes at least a customer selected pattern. From the data, a roll of wallpaper is printed onto a web of  
10   blank media, on demand. A customer is charged accordingly.
